

PROJECT: WORD FREQUENCY IN MOBY DICK

In this workspace, you'll scrape the novel Moby Dick from the website [Project Gutenberg](#) (which contains a large corpus of books) using the Python `requests` package. You'll extract words from this web data using `BeautifulSoup` before analyzing the distribution of words using the Natural Language ToolKit (`nltk`) and `Counter`.

The Data Science pipeline you'll build in this workspace can be used to visualize the word frequency distributions of any novel you can find on Project Gutenberg.

```
# Import and download packages
import requests
from bs4 import BeautifulSoup
import nltk
from collections import Counter
nltk.download('stopwords')

# Start coding here...
# Import and download packages
import requests
from bs4 import BeautifulSoup
import nltk
from collections import Counter
nltk.download('stopwords')

# Get the Moby Dick HTML
r = requests.get('https://s3.amazonaws.com/assets.datacamp.com/production/project_147/datasets/2701-h.htm')

# Set the correct text encoding of the HTML page
r.encoding = 'utf-8'

# Extract the HTML from the request object
html = r.text

# Print the first 2000 characters in html
print(html[0:2000])

# Create a BeautifulSoup object from the HTML
html_soup = BeautifulSoup(html, "html.parser")

# Get the text out of the soup
moby_text = html_soup.get_text()

# Create a tokenizer
tokenizer = nltk.tokenize.RegexpTokenizer('\w+')
```

```
# Tokenize the text
tokens = tokenizer.tokenize(moby_text)

# Create a list called words containing all tokens transformed to lowercase
words = [token.lower() for token in tokens]

# Print out the first eight words
words[:8]

# Get the English stop words from nltk
stop_words = nltk.corpus.stopwords.words('english')

# Print out the first eight stop words
stop_words[:8]

# Create a list words_no_stop containing all words that are in words but not in stop_words
words_no_stop = [word for word in words if word not in stop_words]

# Print the first five words_no_stop to check that stop words are gone
words_no_stop[:5]

# Initialize a Counter object from our processed list of words
count = Counter(words_no_stop)

# Store ten most common words and their counts as top_ten
top_ten = count.most_common(10)

# Print the top ten words and their counts
print(top_ten)
